

## Understanding Your Account

### To All New Water Customers

Welcome to the City of Tontitown. I would like to take a minute to let you know what to expect in relation to your water bill. We include water and sewer services on your bill.

Sincerely, James L Clark, Public Works Director

### Fees, Deposits, and Refunds

Tontitown Water Utility is committed to providing you with the highest quality water and sewer service possible. However, to be able to provide the service there are certain minimal charges which must be paid. These charges are outlined as follows:

#### Deposits

A deposit is required for you to initiate water service. A new deposit is required for each different type of service you have (i.e., commercial, residential, etc.).

These deposits are refundable upon termination of service and will be applied to any final bill. If you have any remaining deposit, you will be issued a check for the balance. Deposits are only refundable to the person whose name is on the account. When you transfer your account (receive water service at another location or move to another location on our water service) you do not have to pay another deposit; your current deposit will be transferred to your new account. If you ever leave the Tontitown Water Utility and receive your deposit back, you must pay a new deposit when you initiate service again with the utility.

#### Service Charge

You pay a minimal service charge when you transfer your account from one address to another in Tontitown's Water Service Area. This non-refundable fee is a standard set rate of \$10.00.

#### Water & Sewer Fees

Tap fees are required for each new service. These fees are non-refundable

#### Irrigation Meters

Meters supplying irrigation systems may be put on "vacation" status during the winter months when you are not watering. You may be able to avoid paying those minimum monthly bills!

#### Payment Options Available

We offer online bill pay at the following website: <https://tontitown.viewmybill.net>. This will allow you to receive your bill by e-mail and paying it online. You can also have your account automatically drafted. These forms can be picked up at the office or printed from our website at [www.tontitown.com](http://www.tontitown.com) under Departments/Water & Sewer Utilities/Water and Sewer Applications.

Online bill pay allows you to choose the day the payment is taken from your account and bank drafts are posted on the 15<sup>th</sup> of every month or the next business day. You may choose one or both options as your payment option. Remember when registering for online bill pay you will no longer receive a paper bill, it will come to your email.

#### Preventing Sewer Backups

Have you ever had your sewer plug up and back into your home or business? Hopefully not, but if you are not careful it can happen. A large number of sewer backups are caused by grease. Grease blockages are caused by disposing of fats, oils and greases down the drain. Over time they build up inside the pipe that connects your home or building to the public sewer system, eventually plugging it completely. When this happens, the sewer draining from your home or business backs up and overflows onto your property or into your home or business. Below are some things that you can do to avoid grease caused sewer backups in your home or business.

In addition to the smell, mess and threat to health, sewer overflows are costly to remedy and repair. Plumbers and others that clean drains can cost a lot of money, and the responsibility for the cost is the homeowners.

HOMEOWNERS can greatly reduce the chance of a grease blockage by not using the kitchen sink and garbage disposal for food scraps. Instead, always use a paper towel or rubber spatula and thoroughly scrape plates and pans into the garbage can before washing. Let melted oils used for cooking solidify in a container on the counter or in the refrigerator before placing them into the garbage. Vegetable and meat scraps, salad dressing, rice, butter, cooking oils and many other common items quickly turn to grease that will eventually block your sewer. Also garbage disposal can lower your water bill.

COMMERCIAL CUSTOMERS who discharge fats, oils and greases are required to pre-treat their sewer discharges containing fats, oils, and greases. Operating a good grease abatement program also makes good business sense. A grease blockage can shut a business down for several days and cost thousands of dollars in lost profits and clean-up expenses. A little preventative maintenance will ensure that you meet City Code and avoid this costly problem.

First, keep your "gray" and "black" water drains separate. Gray water lines are drain lines for disposal of grease-laden kitchen waste. Black water lines are drain lines for restrooms. Second, always scrape all plates, pots and pans into the garbage. Third, as required by City Ordinance for commercial food preparation businesses and restaurants, install and maintain a grease pre-treated system. Pre-treatment systems can include interior grease traps, exterior grease interceptors or bio-treatment, or a combination of these systems.
